Audit #51

Scenario: healthcare

Model: claude-sonnet-4-5-20250929

Latency: 26,427ms

### VERIFIED ARTICLE

Q: Is the flu shot safe for my child?

A: Yes, the flu shot is safe for children ages 5 to 12. It has been used for many years and is carefully tested before being given to kids. Millions of children get the flu shot every year. The vaccine helps protect your child from getting very sick with the flu. Serious side effects are very rare. If you have questions about your child's health history, talk to your doctor or nurse before getting the shot.

Q: When should my child get the flu shot for the school year?

A: The best time is early fall, ideally by the end of October. This gives your child's body time to build protection before flu season gets busy, which usually happens in winter. If you miss that window, it's still helpful to get the shot later. Flu season can last into spring, so getting vaccinated in November, December, or even later still offers protection. It takes about two weeks after the shot for your child's body to build full immunity.

Q: What side effects might my child have after the flu shot?

A: Most children have no side effects or only mild ones. Your child might have a sore arm where they got the shot, and it may be a little red or swollen. Some kids feel tired, have a mild headache, or get a low fever for a day or two. These are normal signs that the body is building protection. The flu shot cannot give your child the flu because it does not contain live virus. If side effects happen, they usually go away on their own within a couple of days.

Q: Where can I take my child to get a flu shot?

A: You have several options. Your child's doctor's office or pediatrician is a great place to start. Many pharmacies also give flu shots to children, though some have age limits, so call ahead to check. Local health departments often offer low-cost or free flu clinics, especially before the school year starts. Some schools host vaccination events where nurses give flu shots on-site. Check with your child's school or your insurance company to find convenient locations near you.

Q: What should I do if my child is sick on the day of their flu shot appointment?

A: It depends on how sick your child is. If your child has a mild cold with a runny nose or light cough but no fever, they can usually still get the flu shot. If your child has a fever or is feeling very unwell,

it's better to wait until they feel better. Call your doctor's office or the place where you planned to get the shot and ask if you should reschedule. They can help you decide based on your child's symptoms.
